Generative AI Use and Student Declaration for ISL 443E

Project Design and Management | İTÜ Management Engineering Programme

This course develops students' ability to design, plan, deliver and explain a project. Generative AI may assist with learning, but every student must be able to demonstrate their own understanding and account for their contribution. The following principles, together with the *"YÖK Ethics Guide of Generative Artificial Intelligence Use in The Scientific Research and Publication Process of Higher Education Institutions"* the link to which is also provided below, apply to all in-class activities, individual work, and group submissions, including project proposals, interim work, final reports, and presentations.

Course rules

1. Responsibility for submitted work. Write your own explanations and make your own project decisions. Do not submit material produced by an AI system—including prose, analyses, calculations, diagrams, schedules, risk registers or presentation content—as though you created it. Editing or paraphrasing such material does not, by itself, make it your original work.

2. Appropriate assistance. Consider whether you could accept the same help from a person under the assignment instructions. If having someone else complete a substantive part of the task would be unacceptable, asking AI to do that task is also unacceptable. This applies to both individual contributions and the team submission.

3. Evidence and references. Base project claims on sources you have consulted yourself. Search tools may help you discover literature, but verify each publication, read the relevant material and cite the original source. AI output cannot serve as evidence for a factual claim. If examining AI output is an approved part of the project itself, identify the output and explain the method used to examine it.

4. Course, team and external information. Do not enter course slides, recordings, assessment materials, another student's work, personal information, or non-public information about a project or outside organisation into an AI service unless you have received the necessary permissions, including the instructor's permission for course materials. Obtain permission before entering material that belongs to a teammate or external partner.

5. Use during teaching and assessment. Follow the instructor's directions for each lecture, in-class activity, presentation and supervised assessment. Use an AI tool during those activities only when its use has been authorised for the particular activity.

6. Permitted learning support. You may use AI within these rules to explore a concept, generate practice questions, identify possible sources to check, or review spelling and grammar. Assess its suggestions critically. A spelling check does not authorise a tool to rewrite substantive passages. Any assignment-specific permission to produce AI-assisted content must be followed exactly and the use disclosed.

7. Disclosure for written submissions. Attach an individual declaration to every written take-home submission, even when the document is submitted by a team. Each student must say whether they used AI and, if so, specify the tool, purpose and affected part of the work. Disclosure makes the process transparent; it does not turn prohibited use into permitted use.

8. Accuracy and academic integrity. Check references, quotations, figures, data, calculations and descriptions of others' findings before submission. Invented sources, fabricated information and substantial misrepresentation may be treated as academic misconduct regardless of how the material was produced.

9. Explaining individual contributions. Keep enough notes or project records to explain how you developed your work. The instructor may ask you to discuss your contribution, methods, evidence or project decisions. Concerns about a possible breach will be considered under the applicable İTÜ procedures.

Students must also comply with the ethical principles set out in the Council of Higher Education's (YÖK) 2024 *Ethics Guide of Generative Artificial Intelligence Use in The Scientific Research and Publication Process of Higher Education Institutions*. They must consider the risks of using generative AI identified in the guide. Ethical violations may give rise to disciplinary liability, depending on their nature and severity.

Students must read the guide's section entitled "Some Important Recommendations for the Use of Generative AI Systems" and follow those recommendations when preparing assignments and projects. The guide is available at: *https://proje.yok.gov.tr/*

Individual student declaration

Complete and submit this declaration with each written take-home assignment. Every team member submits their own form.

Student name: _____

Team number and project title: _____

Submission title and date: _____

I have read the generative AI rules for ISL 443E Project Design and Management. I confirm that I have identified all AI use described below, complied with the course rules, and checked the work and sources for which I am responsible.

AI use (select one):

☐ I did not use generative AI for this submission.
☐ I used generative AI as described below.

Tool(s) used and purpose:

_____

_____

Specific section(s) or task(s) affected:

_____

_____

My own contribution to the submission:

_____

_____

Student signature: _____ Date: _____
